Aims & Scope

Adolescent and Pediatric Gynecology is a multidisciplinary journal that will serve as an international source of information to physicians and other health professionals working in pediatric and adolescent gynecology. The journal is intended to contribute to the development and expansion of this subspecialty by fostering communication between interested professionals, by setting forth existing knowledge, and by stimulating further research.

The scope will include all aspects of clinical and basic science research in pediatric and adolescent gynecology, as well as molecular biology research as applied to the field.

Accordingly, the journal will draw on expertise from a variety of disciplines including pediatrics, obstetrics and gynecology, reproductive and pediatric endocrinology, genetics, and molecular biology.

The format will consist of original studies, brief review articles, communications in brief, book reviews, letters to the editor, and pertinent literature reviews. The journal assures expeditious review of submitted manuscripts and prompt notification of the authors. The Editors make every effort to have accepted papers published within six months of acceptance.
